

ENTERPRISE MOBILITY

ACHIEVE ENTERPRISE MOBILITY WITH PERFICIENT

Application interaction models are changing the way organizations operate and how IT departments develop business applications. With a growing demand to enable work tasks and provide access to enterprise data through a growing number of devices, delivering features and functionality through enterprise mobility initiatives that connect to legacy IT infrastructure is a competitive edge. Yet, traditional application development models require specialized skills and present additional, costly barriers to enterprises.

Rated as a leader by Gartner, Appian is a low-code platform that enables organizations to meet their IT and business goals faster and with fewer resources. It features a 'build-once', 'deploy-everywhere' capability that enables the building of applications to run on any desktop, and natively on both Android and iOS mobile devices. This can be achieved without writing a single line of code through the Appian SAIL (interface and user experience architecture). Interfaces can be created by simply defining the components using drag and drop functionality. Organizations can achieve enterprise mobility by focusing on providing value to users and delivering secure and up-to-date mobile applications.

WHAT'S INCLUDED

Partnering with Perficient to achieve enterprise mobility will result in delivering an instant, secure, empowered, and mobile enterprise application. Perficient will work side-by-side with your team to deliver an enterprise application on the Appian platform. Our certified Appian experts can help you achieve enterprise mobility in a best possible design, ensure appropriate security, and leverage the Appian STAR (Strategy, Transform, Action, Rollout) methodology best practices. These solutions can be launched within weeks for immediate impact either in the cloud or on-premises.

- Solution backlog
- Roadmap and release plan

BUSINESS VALUE

IT departments can reduce costs by relieving themselves from maintaining Browser Compatibility, Device Compatibility, Solution Integration, Software Upgrades, Hardware Procurement, Security and Performance, with Appian's all-in-one integrated platform. Appian's native mobile applications enable features such as mobile branded applications, barcode scanning, all file-type uploads, static offline actions, and business data management with Good Application Data Management.

WHY PERFICIENT

As the market leader in business process management (BPM) software, Appian delivers an enterprise application platform that unites users with their data, processes, and collaborations — in one environment, on any mobile device, through a modern social interface. On-premises and in the cloud, Appian is the fastest way to deliver innovative business applications. The Appian Enterprise Mobility offering for an architect, subject matter expert and developer for six weeks. Perficient is the leading digital transformation consulting firm experienced in identifying and solving customer problems with enterprise mobility solutions. At Perficient, we are committed to helping our clients achieve faster adoption to improve productivity and competitiveness, grow and strengthen relationships with their customers, suppliers, and partners, as well as reduce costs.
